MEMORANDUM FOR: Chief, Real Estate and Construction Div.

ATTENTION: [redacted]

25X1

SUBJECT: Installation of Air Conditioning System

1. Due to the lack of supplementary air conditioning particularly during hours when the building system is not functioning operating conditions in the Signal and Operations Centers are almost untenable. This is particularly true of the Signal Center where a large quantity of electronic equipment is generating considerable heat.

2. There has been numerous discussions on this subject between representatives of your office, Signal Center, Operations Center and this office which started in early March. I appreciate that there are many problems associated with the installation of an additional air conditioning system particularly in the area of regulations and I feel that you are without a doubt doing everything you can to obtain the necessary approval and get the installation accomplished.

3. I would like to emphasize at this point, in order that no stone will be left unturned to expedite this installation, that current conditions are seriously affecting the morale and ultimately may have adverse health reactions due to the excessive heat.

4. I would appreciate an estimate as to when this installation will be accomplished.
